                                                                                                                                                                                                                                                                                 CC non-cancer cell, where an increase in the expression level of TTK protein CC indicates the presence of cancer other than ovarian cancer. Also included CC are reducing growth of a cancerous cell (by contacting a cancerous cell CC in the cell), an assay for identifying a candidate agent that reduces CC growth of a cancerous cell (comprising: (i) detecting the activity of a CTK polypeptide in the presence of a candidate agent; and (ii) comparing CC the activity of TTK polypeptide activity in the absence of the candidate agent contacting a cancerous cell (comprising: (i) detecting the activity of a CTK polypeptide in the presence of a candidate agent; and (ii) comparing CC the activity of TTK polypeptide activity in the absence of the candidate agent contacting a cancerous cell displaying elevated expression of TTK-condidate agent that reduces TTK activity) and assessing the prognosis of a cancerous disease other than ovarian cancer in a contacting polynucleotide with a candidate agent; and (ii) determining the cell of expression of TTK-encoding polynucleotide in a test cancer cell of a subject; and (ii) comparing a CC level of expression of TTK-encoding polynucleotide in a test cancer cell of a subject; and (ii) comparing a CC level of expression of TTK-encoding polynucleotide in the test cancer cell with a level of expression of TTK in the test cancer cell with a level of expression of TTK in the test cancer cell is indicative of the prognosis of the polynucleotide in a control non-cancer cell is contactive to the level of expression in the control non-cancer cell is concerned to the prognosis of the cancerous disease other than cancer. The methods are also useful for determining the ability of a cancerous disease other than cancer. The methods are also useful for determining the ability of a cancerous disease other than covarian cancer. The methods are also useful for determining the ability of a cancerous disease. The ability of a cancerous disease other than covarian cancer than ability of a cancerous disea
                                                                                             US-10-705-757-3 (1-1302) x ABU61613 (1-313)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to detecting cancer (other than ovarian cancer) is a subject, comprising comparing the expression levels of tyrosine threonine kinase (TTK, a mitotic checkpoint gene) polypeptide or polynucleotide in a test cell obtained from the subject and in a normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting cancer in a subject, by comparing expression levels of tyrosine threonine kinase polypeptide or polynucleotide in a subject cell and a normal cell, where an increase in the expression level in the test cell
                                                                                                                                                                                                                                                            Sequence 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 34-35; 79pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            is indicative of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2003-456566/43
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Reinhard C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-FEB-2001; 2001US-0289813P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the protein sequence of the human contents serine/threonine protein kinase and proto-oncogene, PIM-1. PIM-1 proteins are the paralogues of novel human and murine PIM-3 proteins (see ABR62932 and ABR62933) of the invention, which are therefore expected to be involved in cancer and cell growth regulation. PIM-3 is also involved in the development of insulin resistance and type 2 diabetes mellitus. The invention relates to the use of PIM-3 nucleic acids and proteins in:

C screening assays for compounds that modulate insulin resistance or type 2 diabetes mellitus (e.g. chromosomal mapping, tissue typing, corresponded by predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, pharmacogenomics); and for the preparing a medicament for the treatment of insulin resistance or type 2 diabetes medicine to the treatment of insulin resistance or type 2 diabetes medicament for the treatment of insulin resistance or type 2 diabetes medicament for the treatment of insulin resistance or type 2 diabetes medicament for the treatment of insulin resistance or type 2 diabetes medicament for the treatment of insulin resistance or type 2 diabetes medicament for the treatment of insulin resistance or type 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human or murine PIM-3 DNAs or polypeptides, useful for as agent for identifying anti-type 2 diabetes mellitus drugs, or treating insulin resistance or type 2 diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO2003060130-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (AVET )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          19-JAN-2002; 2002EP-00001401

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, comprising to a relative variation of the nucleic acid sequence. Also call deferentially regulated in an animal subjected to pain and a comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a complex that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the polypeptides or their antibodies. The polynucleotide given in the collopophides or their antibodies. The polynucleotide or the compound that composition comprising the one or more compound that composition injury (Chung), chronic constriction compains a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction construction which is differentially expressed during pain. Note: The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed continuation of

The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 313

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                              The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders in chide systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy. This sequence represents a human PRO polypeptide of the

Molecular
G-protein
                     The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TMF receptors, G-protein coupled receptors, methyl transferases, ligases, etc. The present sequence is the human PIM 1 protein. This sequence is used to illustrate the method of invention.
                                                                                                                                                                                           Designing a ligand binding to a target molecule, comprises identifying molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesizing ligand
                                                                                                                                                                                                                                                                   WPI;

CC antiasthmatic, and respiratory activity. A polynuclectide CC of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the CC agonist, antagonist, or antibody that specifically binds to the CC golypeptide is useful for treating an immune related disorder such as CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, cyteoarthritis, as spondyloarthropatthy, systemic sclerosis, and idiopathic inflammatory myopathy, Sjogren's syndrome, systemic celerosis, and cidiopathic inflammatory myopathy, Sjogren's syndrome, systemic sclerosis, and cidiopathic marcoidosis, autoimmune haemolytic anaemia, autoimmune charmolytic anaemia, a hepatobiliary cirrhosis, granulomatous hepatitis, Gulilain-Barre syndrome, confisease, infectious or autoimmune chronic active hepatitis, primary confisease, infectious or autoimmune enediated skin disease, abullous skin claease, arthma, allergic rhinitis, atopic dermatitis, psoriasis, an allergic disease, arthma, allergic rhinitis, atopic dermatitis, psoriasis, an allergic confisease, and atransplantation associated disease of the lung, confict disease of the lung, of the invention.

CC of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 200

CR7 is a serine/threonine protein kinase involved in T-cell lymphomagenesis. The CR7 gene is identical to the putative proto-oncogene pim-1, which is over- expressed in about 50% of MuLV-induced T-cell lymphomas. Recombinant CR7 polypeptides can be produced e.g. as GST fusions for use as immunogens and as diagnostic and therapeutic agents

This invention describes a novel isolated antibody or antibody fragment (I) which selectively binds to a polypeptide encoded by cytokine respor gene 2 (CR2) and modulates CR2 activity. The products of the invention have cytostatic, anti-allergic, immunosuppressive and antimicrobial activity. The antibodies are useful as therapeutic agents for regulating cellular proliferation and differentiation and for treating all kinds of the contraction and differentiation and contractions are useful as the contraction and contraction and contractions are useful as the contraction and contraction

protein kinase (EC 2.7.1.37) pim-1 - mouse

N;Alternate names: kinase-related transforming protein pim-1; p
C;Species: Mus musculus (house mouse)
C;Date: 28-Dec-1987 #sequence_revision 28-Dec-1987 #text_chang;
C;Accession: A24169
R;Selten, G; Cuypers, H.T.; Boelens, W.; Robanus-Maandag, E.;
Cell 46, 603-611, 1986
A;Title: The primary structure of the putative oncogene pim-1;
A;Reference number: A24169; MUID:86272109; PMID:3015420
A;Accession: A24169
A;Molecule type: DNA
A;Residues: 1-313 <SEL>
A;Cross-references: UNIPROT:P06803; GB:M13945; GB:M13946; NID:
C;Comment: Pim-1 autophosphorylates at unknown sites.
C;Genetics:
A;Gene: pim-1
A;Introns: 28/1; 63/3; 80/3; 203/1; 262/1
C;Superfamily: kinase-related transforming protein; protein kinase-relation; phosphotransferase; protein kinase homology <KUN-
F;36-290/Domain: protein kinase homology <KUN-
F;44-52/Region: protein kinase ATP-binding motif
F;67/Active site: Lys #status predicted
                                                                                                                                                                                                                                                    음 성

C;Function:
A;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonir
C;Superfamily: AMP-activated protein kinase; protein kinase homology
C;Keywords: ATP; magnesium; phosphotransferase; serine/threonine-specific protein kinase
F;17-271/Domain: protein kinase homology <KIN>
F;25-3J/Region: protein kinase ATP-binding motif
F;48,67,142,144/Active site: Lys, Glu, Asp, Lys #status predicted
F;147,151/Binding site: magnesium (Asn, Asp) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 serine/threonine-specific protein kinase (EC 2.7.1.-) NPK5 - common tobacco
